

SuperScout®

Web Filter™

Businesses are increasingly recognizing the benefits of providing Internet access to employees so they can research issues, check out the competition and stay updated on the latest business developments. But the Internet can also turn into non-productive hours of day-trading, online auctions and cyber-shopping if not managed properly.

SuperScout Web Filter can help you:

Manage Employee Productivity

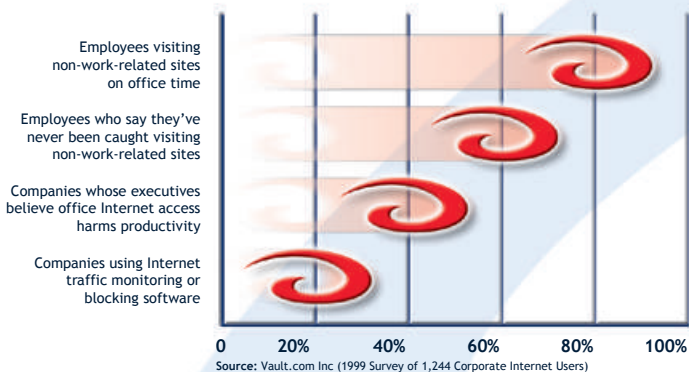

From last night's sports scores to online games and day-trading, the Internet is a seductive place. How many hours of lost productivity can your company afford?

Enhance Network Bandwidth

Combine recreational surfing with bandwidth-intensive activities such as streaming audio/video and MP3 downloads, and you have a significant impact on network performance.

Reduce Legal Liability

Letting employees surf anywhere on the internet can lead them to stray to clearly inappropriate sites, sexually explicit sites and those promoting violence and hate speech. This kind of activity can lead to lawsuits, harassment charges and even criminal prosecution. Protect your employees and your company by promoting intelligent Internet use.

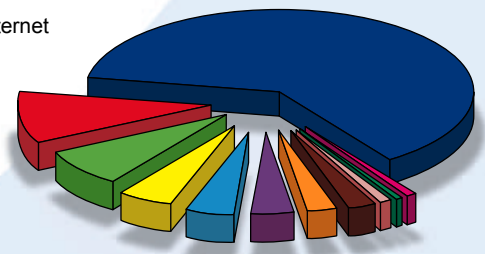

How can you provide Internet access that encourages productivity and discourages abusive surfing? How can you protect your network connections from being clogged by music downloads and game-playing? And how can you protect your company from legal actions resulting from inappropriate

SuperScout® Web Filter™ from SurfControl offers the most advanced filtering technology available for the corporate environment, easing the challenge of managing Internet usage in the workplace.

Category Analysis Report:

- News
- Adult

SuperScout[®]

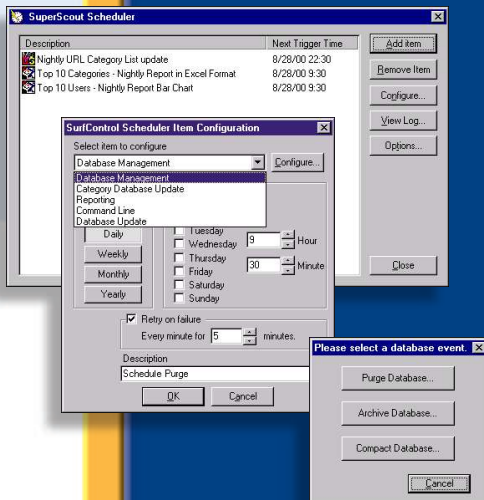

Web Filter[™]

SuperScout Web Filter provides the most powerful filtering and reporting for:

▶ managing employee productivity

For Example: Allow streaming video from investment sites, but deny it from sports sites during work hours.

Focused Filtering

- The largest content database of URLs in the industry
- URLs identified by category, unifying content and technologies from filtering pioneers SurfControl, SurfWatch, and LittleBrother
- Tracking of HTTP, FTP, Telnet, and other Internet protocols by user, group, or enterprise
- Real-Time Monitor with color coding to see who's surfing where, right now
- Automatic overnight updates of categories and content

Precision Bandwidth Control[™]

- Regulate streaming audio, video, images by file extension
- Combine with categories for intelligent policy enforcement

Intelligent Access Policies

- Set up rules by using who, what, where, when objects
- Any combination of positive and negative filtering
- Complete flexibility by day, time, categories, file type, and user
- Identify 'problem' behavior before it becomes a legal issue
- Instant user notification of blocked sites
- Automatic email of policy breaches to specified manager
- Case-building for repeat offenses using individual-level monitoring

Corporate Access Policies

SurfControl encourages you to define, implement, and use a corporate Internet Acceptable Use Policy (AUP) that clearly explains what is and is not acceptable Internet usage.

▶ FREE 'AUP' Guide

For a FREE copy of 'The guide to developing your company's Internet Acceptable Use Policy (AUP)' click on 'RESOURCES' on our Home page at: www.surfcontrol.com

Auto-Scheduling

- Generate and distribute reports automatically, by email or Web browser.
- Update Category Lists every night, automatically
- Schedule Monitoring Database archives and purges during periods of low use

▶ enhancing network bandwidth ▶ and reducing legal liabilities
as organizations provide Internet access to their employees.

Rapid Reports

- Web-based reporting for fast, easy status and remote access
- Over 60 easy-to-read standard reports that can be customized to match your needs

Focused Category Lists

SuperScout Category List

The standard category list includes the most common "danger" areas like pornography, violence, and gambling, as well as more than 35 other categories. You can set positive or negative filtering by category, including news, sports, chat rooms, job searches, and search engines.

WEB4Business List

SurfControl has joined forces with one of the world's leading suppliers of business information to provide the first positive business list for Internet filtering. Websites are categorized by Standard Industry Sector (SIC) codes so that you can define positive or negative access by industry.

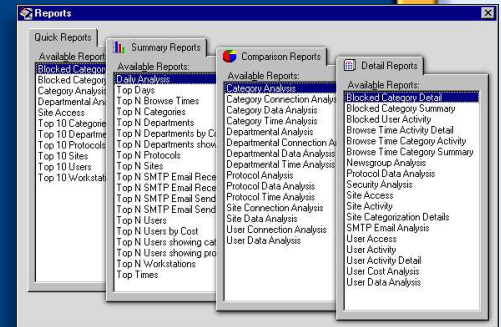

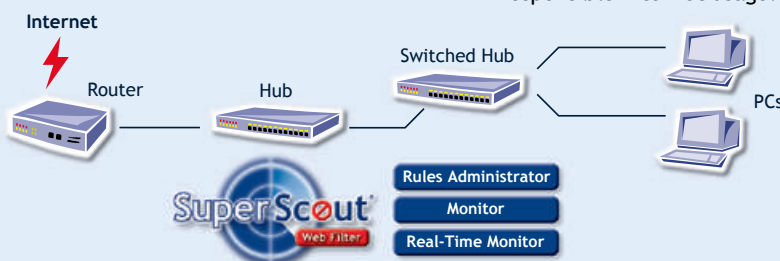

Scalable and Distributed

SuperScout Web Filter works in arrays or distributed across the enterprise to match your network topology. Multiple SuperScout Web Filter agents can monitor and manage separate parts of the network, controlled by a single Rules Administrator that handles enforcement, updates content lists and runs reports from a single database.

Flexible Configuration

When installed behind a firewall or proxy server, SuperScout Web Filter's Pass-By™ monitoring radically exploits packet sniffer techniques to build an accurate picture of network traffic without affecting network performance. Pass-By™ monitoring also handles all Internet-based protocols, so you can monitor SMTP, POP, and NNTP as well as standard HTTP and FTP requests. When installed with an existing network architecture, SuperScout Web Filter uses Pass-Through technology to monitor, report and control HTTP and browser-based FTP traffic without requiring any network reconfiguration. So, whatever your network, SuperScout Web Filter offers a flexible solution for managing responsible Internet usage.

SuperScout Web Filter is compatible with our Virtual Control Agent plug-in, an artificial intelligence engine that automatically categorizes new websites as users find them and applies the SuperScout rules to monitor and access websites too new to be categorized.
